(54) Title: BALLISTIC PROTECTION

(57) **Abstract:** The present invention relates to ballistic protection for use in personal equipment or in vehicles of various types such as cars, helicopters and boats or for use in permanent or temporary protection of various types in buildings or other fixed or mobile installations. The ballistic protection according to the present invention can be employed as protection against various kinds of low or high-velocity projectiles in addition to which it will be capable of offering protection against splinters and various kinds of fragments which could otherwise injure people or damage vehicles or installations if they had the opportunity of penetrating right through an external protective layer. The ballistic protection according to the present invention can further be combined with a drinking water reservoir since an essential part of the protection is a liquid container. The drinking water supply, for example, for a soldier is thereby improved both with regard to available volume and position/carrying capacity.
